This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

**Usage guidelines**

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

**About Google Book Search**

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

# PREFACE.

THE Electric Telegraph may be said now to embrace the whole of the civilised world in its network of cables and wires. The largest class of persons who are continually availing themselves of its great and manifold advantages are those engaged in mercantile pursuits. On the other hand, there are great disadvantages connected with the present system of sending messages, not the least important of which are those of expensiveness and publicity. The merchant on looking over his accounts always expects to find the item for "telegrams" a very heavy one; it may, therefore, be assumed, on the ground of economy alone, that he would be found willing to give a fair trial to any good system which guaranteed a considerably reduced expenditure; and there can be no doubt that business men generally feel the want of a better and more economical system.

As regards the publicity of the old system, the Compiler is aware that cipher messages are used to ensure secrecy, but their use is very limited owing to the trouble and difficulty they occasion to the sender, transmitter, and the receiver, caused by the want of a simple system.

These and other equally great disadvantages satisfied the Compiler that an attempt should be made to overcome them; and as it does not appear that the attempt has been made by anyone else, he ventures to submit "The A B C Universal Commercial Electric Telegraphic Code" to public notice. It will be found to contain a dictionary of sentences, adapted to meet the general requirements of Merchants, Shipowners, Brokers, Agents, &c., &c.

SIMPLICITY, ECONOMY, and SECRECY, are the three great objects which the Compiler has kept in view.

With regard to SIMPLICITY, every sentence is identified with and represented by a single Code word. This is the simplest and easiest possible method for any telegraphic Code.

The ECONOMY of using this Code will be seen at a glance. Very

frequently a single Code word represents a complete message, and in other cases a Code word would represent from four or five to upwards of twenty ordinary words. The saving effected on a single foreign message would therefore, in many cases, more than repay the cost of a copy of the volume, and in a short time the saving would be quite a hundred-fold. It will, of course, be necessary that any mercantile house using this Code should see that their friends with whom they wish to communicate are supplied with a copy; the cost of which, as before remarked, will be insignificant when compared with the saving effected.

The SECRECY of the message between two persons can be made absolute even though any other person may have every command of the telegram and of the contents of the volume. Every sentence is identified with a Code Number of five figures to be found in 1 2 3 4 5 6 7 8 9 0, which can be represented by a group of ten different letters of the alphabet, after the same manner as a tradesman places a private mark on his goods to denote price, &c. All that is necessary is that the two persons shall agree upon any ten different letters that may suggest themselves. Examples will be found on pages vi and vii. It will be seen thereby that the number of possible variations is practically unlimited; consequently, the choice of a Code of ten letters is also unlimited, their great variety admitting of frequent changes if necessary; in fact, the change might be made for every message, or every hour, by agreed arrangement, and thus the absolute secrecy of the Code maintained.

The Compiler hopes that his work will show the possibility of attaining SIMPLICITY, ECONOMY, and SECRECY, the three great objects of a telegraphic code, and that the time may not be far distant when the use of this Code will become as universal as a Code of Marine Signals, a Railway Guide, or Time Table.

W. C.-T.

LONDON, *September*, 1873.

*** All communications respecting this work should be addressed *by letter only* to the Compiler,

W. CLAUSON-THUE,
Lombard Exchange,
Lombard Street, London, E.C.

## EXAMPLE.

To send a telegram according to the plan of this work, first have the message clearly written out at full length, then select the leading words or their equivalents in the message. On referring to the 'A B C,' the Code Word will be easily found in the next previous column, opposite to such leading word or words, for example :—

### MESSAGE.

'There is a favourable change in the market. Telegraph cost, freight, and insurance Petersburg Y.C. Tallow, early delivery, payable one-third on shipment, two-thirds on delivery. We shall be glad to receive your market report. Have you attended to last order? When were the goods forwarded? Present supplies are not equal to requirements. Keep us well advised of sailings from your port.'

### CODED.

Cementation, Coronet, Hoshama, Depose, Parrot, Gifted, Overmatch, Grayling, Reprisal, Sandy.

### CIPHER*.

With regard to SECRET telegraphy in cipher, chose any ten different letters of the alphabet, for example "March winds," to represent 1 2 3 4 5 6 7 8 9 0. As a great number of the sentences are numbered above 9,999 it is necessary to make them all of five figures each; for this reason noughts have been prefixed until the number 10,000 is arrived at. If this plan were not adopted some confusion would arise to the receiver, as the letters would become mixed up. The above message by this plan would be as follows :—

M A R C H W I N D S

smswd | smcca | msasw | smwwn | scsiw | sahmm | srndw | sahhw | sciis | scdsm

All that the receiver has to do is to tick off the message into groups of five letters each as above.

* Most of the Telegraph Companies regard five ciphers as equal to one word.

## EXAMPLE CIPHER CODES.*

The following tables have been compiled to illustrate the formation and selection of secret codes; and to avoid possible confusion, the letters J and W have been purposely omitted, because of their similarity to I and V respectively, which are by some methods of telegraphy frequently made to do duty for each other.

(Take any 10 letters reading from left to right, or from right to left.)

| | | | | | | | | | |

**Execute**—*continued*
If you cannot execute the whole of the order send
**Executed.** [most you can at once
Can the order be executed
It cannot be executed
It has been executed
Has (have) been very well executed
Has (have) been very badly executed
If it (they) can be executed
**Expect.**
When do you expect
What do you expect
How much (many) do you expect
I (we) expect
I (we) do not expect
You must not expect more
When do you expect deliveries
When do you expect arrivals
When do you expect shipments
**Expected.**
Is not expected until
Expected to arrive
Expected to deliver
Expected to ship
Expected to improve
Expected to decline
Expected to remain quiet
A large quantity expected
Are any expected
There is nothing expected here
No more expected
**Expenses.**
Keep down expenses
What are the expenses
Very considerable expenses
Expenses must not exceed £ ——
Expenses to be paid by you
Expenses divided
**Explanations.**
You must give satisfactory explanations
Can you give satisfactory explanations
What explanations can I (we) give
The explanations are not satisfactory
The explanations are very satisfactory
The explanations are accepted
**Export.**
Our export trade is very brisk
Our export trade is very dull
Our export trade is fair
**Facility.**
What facility have you

| CodeNo | Code Word | |
